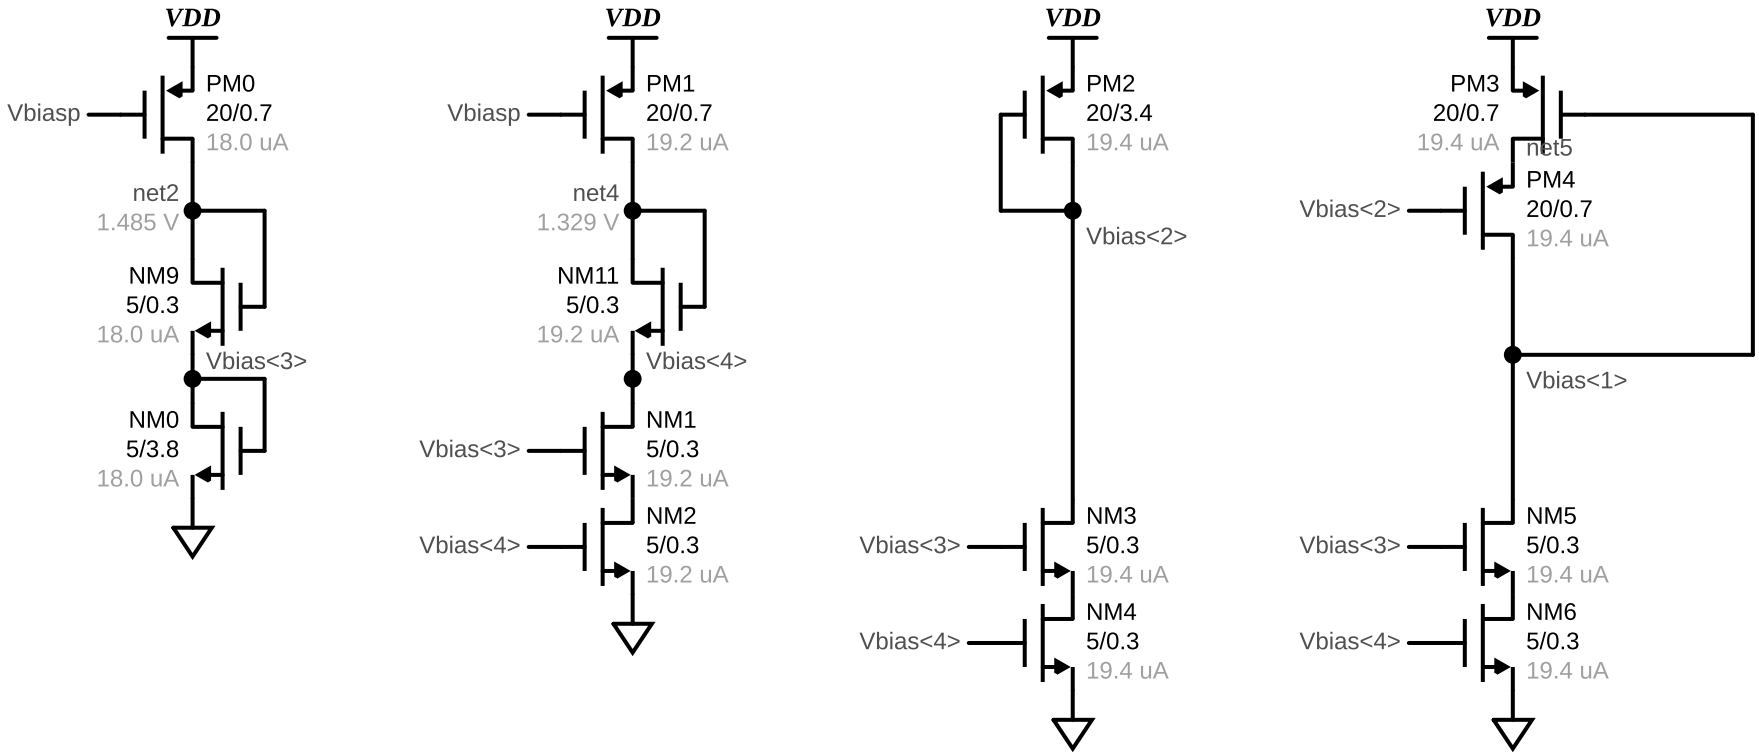
Cascode_bias: wide-swing cascode bias network, outputs Vbias<1> to Vbias<4>



Sizes: multiplier x W/L in um (nf = 1), sky130 LVT devices. Currents and node voltages: tt, 27 °C, VDD = 1.8 V.
Long-channel diodes: NM0 L = 3.8 um (Ln_MWS), PM2 L = 3.4 um (Lp_MWS). Vbiasp comes from Bias_gen.
Vbias<3> and Vbias<4> bias the NMOS cascode / sink pairs, Vbias<1> and Vbias<2> the PMOS cascodes.
